Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-101 are rejected under 35 U.S.C. 103(a) as being unpatentable over Moon (US Pat. 5,215,558).

Moon teaches an electrical dust collector which includes an ion generator; the ion generator comprising a first array of electrodes; a second array of electrodes; the first and second electrodes are ion emitter and ion collectors respectively; an array of auxiliary electrodes between the first and second arrays; an array of accelerating electrodes interposed between the second electrodes (see Fig. 1; col. 1, ln. 10-27).

Although Moon teaches the accelerating electrodes to be interposed, and not downstream of the second electrodes, the accelerating electrodes are positioned towards the end of the second electrodes (see Fig. 1). Therefore, it would have been obvious to one of ordinary skill in the art, at the time the invention was made, that the accelerating electrodes of Moon's invention would be functionally equivalent to the trailing electrode of the instant claims. Moreover, Applicants have not disclosed the advantages of this particular position of the trailing electrode over other positions.

In regards to claims 7-8, 12, 18-21, 23, 25-26, 30, 35-36, 40, 47-49, 51, 53,-54, 57, , 62-63, 65, 74, 79, , 82, 84-101, it has been within the skill in the art that particular configurations or

sizes of the electrodes would have been an obvious matter of design choice, depending upon user's preference and intended use. Furthermore, Applicants have not disclosed the advantages of the electrodes having this particular configuration over other configurations.

In regards to claims 4-6, 9-10, 14-17, 33-34, 37-38, 42-45, it has been settled within the skill in the art that the manner of operation, intended use, or how the product is made, would have insignificant patentable weight when an apparatus claim is being considered. See MPEP 2114.
